Unit 4 · Session 1 · SLO 1 — Solved Worksheet

Name: AKARSH MURALI AKARSH MURALI | **Reg. No:** RA2511030010067

Unit – 4 : Session – 1 : SLO – 1 | Functional Programming — Core Principles

I. Fill in the Blanks

1. pure — functional programming emphasizes the use of pure functions.
2. Mutation of state (side effects) — changing shared state is avoided to keep code pure.
3. declarative — functional programming is a declarative programming paradigm (what to compute, not how).

II. Multiple Choice

1. b) Predictable outputs due to pure functions — the same input always produces the same output, making code easier to test, debug and parallelize.
