Unit 2 · Session 2 · SLO 1 — Solved Worksheet

Name: AKARSH MURALI AKARSH MURALI | **Reg. No:** RA2511030010067

Unit – 2 : Session – 2 : SLO – 1 | Data Types and Variables

Activity (Solutions)

• Output of BoolTest:
• b is false
• b is true
• This is executed.
• 10 > 9 is true
• (The second if(b) with b=false prints nothing.)
• Static vs instance variable: A STATIC variable belongs to the class — one shared copy for all objects, created at class loading, accessed as ClassName.var. An INSTANCE variable belongs to each object — every object gets its own copy, created with new, accessed via the object reference. Changing a static variable affects all objects; changing an instance variable affects only that object.
