Unit 3 · Session 4 · SLO 2 — Solved Worksheet

**Name:** AKARSH MURALI AKARSH MURALI | **Reg. No:** RA2511030010067

## Unit – 3 : Session – 4 : SLO – 2 | join(), sleep() and yield()

### Worksheet (Answers)

• Fill: The method SLEEP() is used to pause the current thread for a specific duration.
• T/F: Calling join() makes the current thread wait until the other thread terminates. — TRUE
• MCQ: True about yield() → C) It gives up the CPU voluntarily for other threads
• Fill: The sleep() method throws INTERRUPTEDEXCEPTION if interrupted while sleeping.
• Find the output: main prints immediately, child sleeps 100ms → B) Main done / Thread done
• T/F: Calling yield() guarantees that the thread will lose the CPU. — FALSE (it is only a hint to the scheduler)
• MCQ: Method that makes the current thread wait for another thread to finish → D) join()
• Fill: The sleep() method is a STATIC method of the Thread class.
• Identify the error: Thread.sleep(1000); without handling → B) Needs try-catch or throws clause
• Fill: The join() method can be used to control the ORDER (execution sequence) of threads.
