Unit – 3 : Session – 4 : SLO – 1 | Thread Priority and Daemon Threads

Worksheet (Answers)

• Fill: The default priority of a thread in Java is 5 (Thread.NORM_PRIORITY).

• T/F: Daemon threads continue running even after all user threads have finished. — FALSE (the JVM exits when only daemon threads remain)

• MCQ: Method used to set the priority → C) setPriority()

• Fill: The priority range for threads in Java is from 1 to 10.

• Find the output: setDaemon(true) before start(), print isDaemon() → A) true

• T/F: Calling setDaemon(true) after start() will throw an exception. — TRUE (IllegalThreadStateException)

• MCQ: Thread type used for background services like garbage collection → C) Daemon thread

• Fill: The method ISDAEMON() returns whether a thread is a daemon.

• Identify the error: setDaemon(true) after start() → C) IllegalThreadStateException

• Fill: Threads with higher priority are MORE likely to be scheduled before lower priority threads.
