Unit 3 · Session 3 · SLO 1 — Solved Worksheet

Name: AKARSH MURALI AKARSH MURALI | **Reg. No:** RA2511030010067

Unit – 3 : Session – 3 : SLO – 1 | Thread Life Cycle and Methods

Worksheet (Answers)

• Fill: The start() method moves a thread to the RUNNABLE state.

• T/F: The sleep() method pauses the thread for a specified time without releasing the lock. — TRUE

• MCQ: Method that makes the current thread give up the CPU temporarily → B) yield()

• Fill: A thread enters the TERMINATED (dead) state when its run() method finishes.

• Find the output: t.start(); t.join(); then print — the child prints 'Hello ' first, join() makes main wait → A) Hello World

• T/F: A thread can be restarted by calling start() again after it has finished. — FALSE (throws IllegalThreadStateException)

• MCQ: Can cause a thread to go into the waiting state → A) join()

• Fill: Calling join() on a thread causes the current thread to WAIT until the joined thread terminates.

• Find the error: calling start() twice → C) IllegalThreadStateException

• Fill: The method ISALIVE() is used to check if a thread is alive.
