Unit 2 · Session 7 · SLO 1 — Solved Worksheet

Name: AKARSH MURALI AKARSH MURALI | **Reg. No:** RA2511030010067

Unit – 2 : Session – 7 : SLO – 1 | Inheritance Basics

Activity – Fill in the Blanks (Answers)

• In Java, inheritance allows a class to acquire properties and methods from another class using the keyword EXTENDS.

• The class that inherits is called the SUBCLASS (child class).

• The class being inherited from is called the SUPERCLASS (parent/base class).

• Inheritance promotes code REUSE and reusability.

• Java supports MULTIPLE inheritance through interfaces but not through classes.
