Unit 2 · Session 11 · SLO 2 — Solved Worksheet

Name: AKARSH MURALI AKARSH MURALI | **Reg. No:** RA2511030010067

Unit – 2 : Session – 11 : SLO – 2 | Interface Inheritance

■ Activity (Solution)

• Fixed code:
• interface Animal { void eat(); } // added missing semicolon/brace fix
• interface Pet extends Animal { void play(); }
• class Cat implements Pet {
• public void eat() { System.out.println("Cat is eating."); }
• public void play() { System.out.println("Cat is playing."); } // missing method added
• }
• public class TestPet { public static void main(String[] args){ Cat c = new Cat(); c.eat(); c.play(); } }
• Output: Cat is eating. / Cat is playing.
• Explanation: since Pet extends Animal, Pet inherits the eat() declaration; any class implementing Pet must implement BOTH eat() and play() — interface inheritance expands the contract the implementing class must fulfill.
