Unit 4 · Session 8 · SLO 1 — Solved Worksheet

Name: AKARSH MURALI AKARSH MURALI | **Reg. No:** RA2511030010067

Unit – 4 : Session – 8 : SLO – 1 | Distributed Computing Principles

I. Fill in the Blanks

1. multiple autonomous (independent) — distributed computing involves multiple independent computer systems working together as one.
2. Message passing (communication/synchronization) — coordination between distributed nodes relies on message passing.

II. Multiple Choice

1. c) High latency — network communication delays are a disadvantage of distributed systems; fault tolerance, scalability and resource sharing are advantages.
