Unit 3 · Session 10 · SLO 2 — Solved Worksheet

Name: AKARSH MURALI AKARSH MURALI | **Reg. No:** RA2511030010067

Unit – 3 : Session – 10 : SLO – 2 | Design Forms Using Labels, Text Fields, Buttons and Layout Managers

I. Fill in the Blanks

1. JLabel — a JLabel displays static text next to an input field.
2. BoxLayout — BoxLayout with Y_AXIS stacks form components vertically.
3. BorderLayout — arranges components in five regions: North, South, East, West and Center.
4. GridLayout — organizes form fields in a table-like rows-and-columns structure.

II. True or False

1. FALSE — JTextField is single-line only; multi-line input needs JTextArea.
2. TRUE — label.setLabelFor(textField) associates a JLabel with a JTextField for accessibility (mnemonics/screen readers).

III. Multiple Choice

1. C — GridLayout arranges components in rows and columns.
2. B — frame.add(button, BorderLayout.SOUTH) places the button at the bottom region.

IV. Programming

1. Identify the output layout: B — FlowLayout places the label, text field and button left to right in a row, wrapping to a new line if the frame is too narrow.
2. Identify the missing component: B — new JTextField("Enter email", 20) creates the single-line input field for the form.
